1. INTRODUCTION

The Center for the Study of Organizations and Decisions in Economics (CODE) is a research center at the Universitat Autònoma de Barcelona, created in 1995 to promote high quality research in the theory of economic decisions and organizations. Since the beginning of its activities, CODE's main goal is to provide an environment spurring for excellence in research as measured by the highest international standards of scientific quality.

CODE's permanent members belong to the Department of Economics at the UAB, which has lead Research in Economics in Spain for the last twenty five years. The Department is still the natural meeting point for those activities, like undergraduate and doctoral education, for which diversity of interests and abilities are most important.

The activity report strives to be a regular publication that is useful in getting our colleagues acquainted with our research interest. The present edition covers the activities performed during 2009.

In 2009, CODE has hosted 21 visitors from all over the world for stays ranging from one month to a year as well as research trainees. Research activities can be grouped in five areas: Financial Economics/Macroeconomics, Industrial Organization, Mathematical Economics, Public Economics and Social Choice/Game Theory. All this research is developed through 11 research projects financed by the Spanish Ministry of Education, the Catalan Government (Generalitat de Catalunya) and the European Union. This activity has been materialized in 25 papers published in leading economic journals, 15 working papers, 1 chapters in books. Also CODE members are officers in scientific associations, and have participated in major academic meetings, both as organizers and as presenters.

We hope that this report reflects the commitment of CODE to build an increasingly consistent research center that can be taken as a reference point by top quality research within Europe and beyond.

4. RESEARCH PROJECTS

A brief description is given of the research projects in which the members of CODE are involved. These projects are financed by the Ministry of Education and Science through the Inter-Ministerial Commission of Science and Technology, by the Government of Catalonia and by the European Community.

Title: Centre de Recerca en Economia de les Organitzacions (CREO) (2009SGR-00169)

Team coordinator: David Pérez-Castrillo.

Description: The main objective of our work is to understand why and how several organizations emerge, what environments promote their formation and which contracts or allocation mechanisms allow for the stabilization of the cooperation and the sharing of the related profits. We will deal with these questions on the basis of the tools used by game theory (cooperative and non-cooperative) and the models of industrial organization. A fairly important part of our effort will be framed in the areas about *Environmental Economy* and *Innovation Economy*. Another part is framed in the wider notion of Public Economy, as it deals with problems of *Health Economy* and *Design of mechanisms* and *Public Policy*. Lastly, we will also deal with studies of *Business Economy*.

Title: Coalitions, Incentives, and Networks in the Choice of Collective Decisions (2009SGR-00419)

Team coordinator: Jordi Massó Carreras.

Description: We study collective decision making and mechanism design in contexts where groups, networks, and coalitions play an important role in shaping the individual incentives, and in general, in determining the outcome of the social choice. Our main contribution to the collective decision making is that we want to put emphasis on the structures of relationships that connect agents (exogenous or endogenous) as well as on the individual incentives that such structures generate.

Title: Consolidating Economics (Consolider Ingenio 2010)

Team coordinators: Xavier Martínez-Giralt.

Description: Consolidating Economics is a network of the top research institutions in Spain under the leadership of Andreu Mas-Colell. It integrates researchers from CODE and Department of Economics at Universitat Autònoma de Barcelona as well as researchers from Universitat Pompeu Fabra, IESE, IAE, CREI, Universidad Carlos III de Madrid, CEMFI, and FEDEA. Some general aims of the network are (i) foster and project economics research in different areas of science, both theoretical and applied, where a position of international prestige has already been attained; (ii) strengthen interdisciplinary links; (iii) carry out actions to promote and structure economics research in Spain on a level of global prestige; and (iv) encourage activities to increase international co-operation and projection, aimed particularly at Europe and Latin America.

Title: Constitutional Design and Governance issues: Theory, applications and simulation (ECO2008-04756/ECON)

Team coordinator: Salvador Barberà.

Description: Institutional design plays an important role in economic analysis, evidence of which is the recent award of the Nobel Prize to Hurwicz, Maskin and Myerson. The purpose is to analyze mechanisms, existing or theoretically motivated, that will lead agents to behave efficiently. Among these mechanisms we find auctions, voting procedures, matching mechanisms, rationing rules, negotiation schemes, and any market or arbitrage situation. We propose to further study issues in this general area, which has been the unifying topic in our previous projects, although incorporating new lines of research. On the theoretical aspects, we wish to emphasize the problems of information and networks, and to revise basic concepts, like the notion of rationality, in light of the new behavioural theories. On the applied side, we focus mainly on the mechanisms used by public authorities like schools, universities or hospitals to assign students or interns. Methodologically, we incorporate simulations as a method to analyze models that given their high complexity are not tractable through theoretical analysis only. In terms of the topics we address, we widen our studies to issues previously unexplored by our team, such as the decisions concerning science and innovation and aspect of international bargaining. In any case we remain committed to issues of efficiency and justice in order to guide institutional design.

Title: Energía y sociedad

Team coordinator: Xavier Martínez-Giralt.

Description: Advising for the development of an Internet site (www.energiaymercado.es) integrated in the Iberdrola Campus dedicated to the spreading and exchange of information and content related to the liberalized markets of energy whose objective is to contribute to the analysis and understanding of these markets and to the diffusion of the benefits that offer to the society.

Title: Macroeconomic analysis group: Economic implications of habit formation in consumption (2009SGR-00350)

Team coordinator: Jordi Caballé Vilella.

Description: The main subject of research of this group is the study of different aspects of the macro-economic politics, either fiscal or monetary, in dynamic economies of general equilibrium. Next are the different contexts in which these analyses are carried out: open economies, with incomplete markets, with fiscal evasion, with heterogeneous agents and with habits in the preferences. The goals of this project of research are to carry out

three contributions to the analysis of the fiscal politics in economies of dynamic general equilibrium. The first analyzes the measurement of the intergenerational fiscal incidence. The second analyzes the optimum fiscal treatment of the policy of inversion and distribution of dividends of the companies. The third studies the effects of the fiscal policy under incomplete markets and idiosyncratic crashes.

Title: Organizaciones y mercados: Incentivos y Regularización (SEJ2006-00538/ECON)

Team coordinator: Inés Macho-Stadler.

Description: The main target of this project is to understand why and how different organizations emerge, which conditions stimulate their emergence and which contracts or sharing rules maintain cooperation and allow the sharing of its associated benefits. We are also interested in the interaction between market institutions and their optimal regulation in situations in which markets does not produce efficient results. An important part of this project lies in the broad area of Public Economics, specifically in Environmental Economics and Health Economics. We also plan to work in the Economics of Innovation and the area of Firm Economics. Some methodological contributions on Mechanism Design and Contract design, which are orthogonal to all the previous fields, will also be addressed.

Title: Políticas Monetaria y Fiscal Óptimas (SEJ2006-03879)

Team Coordinator: Jordi Caballé.

Description: In this project we plan to study the design of optimal fiscal and monetary policies in two contexts: (a) in closed economies in which individuals face uncertainty with respect to the length of their lives and the their labour productivity and (b) in the framework of monetary unions.

The first part of the project will be a quantitative analysis of the optimum level of tax on capital income in an environment in which there exists an explicit motive for redistribution and insurance because of the uncertainty, and where the distortionary effects of the tax are present in the analysis. In the second part of this project we analyze the monetary and fiscal Policy interactions to sustain a monetary union.

Title: Red Española de Elección Social (Acciones Complementarias) (SEJ2007-30297-E/ECON)

Team coordinator: Jordi Massó Carreras

Description: The aim of the network is to organize a series of meetings with the objective that researches in Spain matching on Social Choice can exchange ideas and present work in progress.

Title: The European Spallation Neutron Source (ESS)

Team coordinators: Xavier Martínez Giralt, David Pérez-Castrillo.

Description: Participation in The European Spallation Neutron Source (ESS) within ESS-Bilbao team. The particular tasks to be developed concern (i) the analysis of potential sources of ESS exploitation income. In particular, the research of actual and potential industrial uses and users as well as the pricing policies and (ii) a detailed analysis of the pros and cons of models of governance of presently functioning European science laboratories.

Title: Votos, Redes y Coaliciones. Estudios sobre la Interacción entre Reglas Formales y Estructurales Organizativas en la Toma de Decisiones Colectivas (SEJ2006-27589-E)

Team coordinator: Salvador Barberà Sàndez.

Description: In a collective decision-making process, formal rules are not the sole influent factor. The degree of collaboration and interaction between the members of the decision-making committee are of special importance.

The following project aspires to approach the latter by combining elements of the traditional decision-making theory with other elements in which formal and informal relationships between actors exist. In that sense, this project offers an approach on decision-making processes in different contexts such as processes where agents share the same objectives but there is asymmetry of information; the design of efficient positive discrimination mechanisms; the assignment of indivisible tasks in cooperative contexts and the influence of voluntary networks and the reciprocal influence with formal decision-making rules.

Title: Workshop on prospective payment and health care provision (ECO2009-07288-E)

Team coordinator: Pau Olivella Cunill.

Description: Paying health insurers and providers through mechanisms that include a risk-adjusted capitation component is gaining popularity in many western economies. The idea is that, making health providers/insurers become residual claimants would foster efficient cost containment.
